

# TEMPORARY INTERIOR CONTAINMENT WALL FRAMELESS WALLS®

Frameless Walls® are a temporary interior containment wall system designed to create separation between construction activity and ongoing facility operations and production. Built for all project sizes, including large-scale and complex environments, Frameless Walls® adapt to the space to control construction dust and debris without relying on traditional wall systems.

## RELIABLE SEPARATION BUILT FOR ACTIVE SPACES.

Designed for all commercial and industrial environments, Frameless Walls® provides a flexible containment solution that can be configured around facility dimensions, access requirements, and project conditions.

### IDEAL FOR:

Manufacturing, Warehousing,  
Renovation, Commercial & Industrial  
Facilities, Large Interior Spaces,  
Pharmaceutical, Institutions

|--------------------------|---------------------------------------------------------------------------------------------------------|
| Material Construction    | 4-ply, 6 mil polyethylene, scrim-reinforced with flame-retardant, antimicrobial, & antistatic additives |
| Nominal Thickness        | 6 mil                                                                                                   |
| Ply Count                | 4-Ply                                                                                                   |
| Floor Connect            | TuffBracket                                                                                             |
| Maximum Use Temperature  | 180°F                                                                                                   |
| Minimum Use Temperature  | -70°F                                                                                                   |
| Interior or Exterior Use | Interior                                                                                                |
| UV Resistant             | No                                                                                                      |
| Attachment Points        | Roof Deck, Bar Joists, etc.                                                                             |
| Construction Door        | Yes                                                                                                     |

## FEATURES

### CONTROLS FLAME SPREAD

Fire-retardant additives support safer temporary containment.

### ANTI-STATIC PROTECTION

Prevents static buildup and dust adhesion.

### ANTIMICROBIAL PROTECTION

Contains anti-microbial additives to help deter mold, mildew, and bacterial growth.

### NO STRUCTURAL SUPPORT REQUIRED

Faster installation with less impact on the facility.

### CUSTOM-FIT DESIGN

Adapts around equipment, columns, access points, and complex layouts

### REINFORCED 4-PLY

Resists tears, punctures, and wear.
